

The Respiratory System
Review Worksheet

Name: _____ Date: _____

Directions: Using pages 70-73 in your textbook and your notes, answer the following questions. Answer with complete sentences.

1. How does the mucus that lines your respiratory system help keep you healthy?

2. What happens to your diaphragm, rib cage, and lungs when you exhale?

3. If your throat is sore, your nose is running, you are coughing, and you have a fever, from what disease might you be suffering?

4. Why is it important that your brain responds to a buildup of carbon dioxide in your blood?

5. Describe how the respiratory and the circulatory systems work together.

6. What is the order of structures that oxygen passes through between your nose and bloodstream?

7. What is the job of the air sacs (alveoli)?
